

## WHY DO YOU NEED POLARISED SUNGLASSES?

Polarised sunglasses are an essential tool for everyday living. Unpolarised tinted sunglasses only darken the scene, reducing the level of light reaching your eyes without controlling the glare. Spotters' distortion-free premium polarised lenses are engineered to vaporise glare and bring your entire field of vision into sharp focus with crisp edges and vivid colours. Eye strain and fatigue are eliminated and natural depth perception is restored.

Manufactured right here in Australia, Spotters Glare-free Polarised Sunglasses seamlessly combine the world's best quality, latest technology and performance in a comfortable and stylish sunglass package. Offering only the latest in style, Spotters are high performance sunglasses that are suited to every lifestyle and sporting application, and designed to withstand the toughest conditions.
